STUDENT PERFORMANCE SYSTEM

SCHOOL OPERATIONS GUIDE

A simple guide to the school workflows.

A practical walkthrough for school administrators, teachers, reviewers and parents - from first setup to published learner updates.

Head of school | administrators | teachers | families

School onboarding edition | v1.0

Prepared 13 October 2026 | Product and workflow guide

START HERE

Know your role and the two assessment paths

Your menus and actions depend on your school role and the records your administrator has assigned.

Role	You can typically	Key boundary
School administrator	Set up school users and structures; create subjects and classes; assign teachers; manage fees, reports, moderation and publication.	School-wide settings stay with the administrator.
Teacher	Work with assigned classes and subjects; take attendance; create class assessments; enter marks; create CBC plans and submit evidence.	Class/subject access is limited to assignments.
Parent / guardian	View learning updates and other school-shared information for linked learners.	Only published evidence appears in learning updates.
Student	Sign in to a linked learner account where enabled by the school.	Student records and login accounts are separate; an admin links them.

TRADITIONAL SCORE ASSESSMENT

CBC EVIDENCE PLAN

Choose the workflow that fits

Use a traditional assessment for a familiar quiz, assignment or exam with marks. Use an assessment plan when you want a curriculum-linked checkpoint with evidence, rubric/scale options and a moderation step.

ADMINISTRATOR | PREPARE

Step 1: set up the school foundation

Complete school structure before asking teachers to enter data.

1. **Confirm academic calendar**
   Check the current academic year and periods/terms. Use consistent dates because assessments, plans and reports rely on them.
2. **Create classes and subjects**
   Use the school's agreed grade/class names and subject codes. Subject creation is an administrator task.
3. **Create staff accounts**
   Open Users > Add user. Create teachers and parents; link a student account only when the school needs learner sign-in.
4. **Assign teachers**
   Open Teacher assignments. Select the teacher, class and subject. A class-wide assignment may be used where school policy permits.
5. **Configure curriculum**
   Confirm the school's curriculum offering, grade mapping, outcomes, rubrics and grade scales. Content availability depends on what has been installed/configured.
6. **Check timetable and access**
   Add timetable entries if using the lesson workspace. Sign in as a test teacher and confirm only intended classes and subjects appear.

Before importing live data

Agree on required columns, admission-number uniqueness, grade labels and a rollback/retention plan. Test with a small, reviewed file before a full-school import.

ADMINISTRATOR | ROSTER

Step 2: add learners and connect people

You can enter records individually or use bulk import for a prepared roster.

INDIVIDUAL SETUP

1. **Add the learner record**
   Open Students > Add student. Enter the learner name, unique admission number, class and grade.
2. **Create user accounts as needed**
   Open Users > Add user. Choose Teacher, Parent or Student. For a student login, select one unlinked learner record.
3. **Link parents**
   When creating a parent account, connect it to the correct learner or learners so parent-facing updates are properly scoped.

BULK LEARNER IMPORT

name	**admissionNo**
className	**grade**

Import sequence
Download the learner template > fill the exact columns > upload the CSV/XLSX > review the sample rows and total row count > choose Import. Fix validation errors in the source file, then upload again.

Account security
Provide each person with their own account. Share initial passwords securely and follow the school's password-change policy.

TEACHER | DAILY OPERATIONS

Step 3: open your classes and take attendance

Teachers only see classes assigned to their account.

1. **Sign in and open the teacher dashboard**
   Use your school account. The dashboard shows your assigned classes, current lesson/timetable context and available actions.

2. **Open Attendance**
   Choose one of your classes. Check the learner roster and mark each learner Present, Absent, Late or Excused.

3. **Review before saving**
   Confirm the date, class and statuses. Save the attendance record and check the response for any learner-specific validation failure.

USEFUL ROUTINE

- Take attendance for the correct class and date; do not reuse another class's roster.
- If a class is missing, ask the school administrator to verify your teacher assignment.
- If a learner is missing, ask the administrator to verify class enrollment before recording against another learner.
- For the scheduled lesson context and CBC focus, use the timetable or lesson workspace where it is configured.

A save conflict is protective
If the system reports that the workspace changed in another session, reload the lesson to get the latest state before retrying. This prevents one session from silently overwriting another.

TEACHER | SCORE-BASED ASSESSMENT

Step 4: create a quiz, assignment or test

Use the traditional assessment path for work that is graded primarily with marks.

1. **Choose Create assessment**
   Open Assessments > Create assessment from the teacher workspace.
2. **Set the assessment details**
   Enter a title, assessment type, maximum score and date.
3. **Choose an assigned class**
   The class list is restricted to classes assigned to you.
4. **Choose an assigned subject**
   Subjects load after selecting a class and are restricted to your class/subject assignments.
5. **Create the assessment**
   After saving, you are sent to its score-entry screen.
6. **Enter and save marks**
   Enter a score for each learner, check the allowed range, then save. Existing marks are shown for editing where supported.

If you cannot select a subject

A school administrator must create the subject and assign it to you for the class. The teacher workflow does not allow teachers to create school subjects.

TEACHER | CBC EVIDENCE

Step 5: plan evidence against learning

Use an assessment plan when you want a checkpoint connected to curriculum focus and evidence review.

1. **Open Assessment plans**
   Choose an assigned class curriculum assignment and academic period.
2. **Create a draft plan**
   Enter the plan title, type, date, optional instructions, components, and an optional rubric or grade scale.
3. **Open the plan**
   A draft is not ready for entry. Move it to OPEN using the permitted plan transition.
4. **Record learner evidence**
   Enter scores, mastery notes, narrative feedback, and configured outcome/competency links. Evidence is submitted for review, not immediately parent-visible.
5. **Follow the review**
   A reviewer may verify, return or reject submissions according to the school's configured process. Address returned items before resubmission.

TRADITIONAL ASSESSMENTS VS CBC ASSESSMENT PLANS

Traditional assessment	CBC assessment plan
Assessment record > marks > score report/analysis	Plan > learning focus/components > evidence > review > publication

Keep drafts private
Saving or submitting evidence is not the same as publishing it. Follow your school's reviewer and publication process before telling families a result is official.

ADMINISTRATOR | REVIEW

Step 6: review and publish evidence

Publication is a deliberate school decision that controls what families see.

1. **Open the moderation queue**
   School administrators review teacher-submitted evidence from the moderation queue.
2. **Check learner and context**
   Verify the class, learner, plan/assessment, outcome or competency, score, rubric and teacher note.
3. **Choose the appropriate decision**
   Verify accepted work. Return or reject work with a clear reason when changes are needed.
4. **Publish when approved**
   Published evidence becomes available in the parent learning-updates view, subject to learner linking and notification configuration.

Keep a clear review trail

Give specific feedback on returned or rejected work. Avoid publishing incomplete or misattributed evidence. Corrected publications should follow the school's review policy.

PARENT VISIBILITY RULE

Parents see published snapshots for learners linked to their account. They do not see teacher drafts or review-stage items in Learning updates.

FAMILY EXPERIENCE

Step 7: link parents and share updates

A parent account must be connected to the right learner before it can show that learner's updates.

1. **Create the parent account**
   A school administrator creates the parent user with the school's approved email and account process.
2. **Link the learner record**
   Select the correct learner(s) and verify names and admission numbers before saving.
3. **Parent signs in**
   The parent opens the school's StudentOS sign-in page and uses the account credentials issued by the school.
4. **Open Learning updates**
   The parent sees only published evidence for learners linked to that account. No linked learner or no published updates produces an explanatory empty state.

If a parent sees no updates

Check in order: parent account exists > correct learner link exists > evidence has been reviewed and published > the parent is using the correct account.

WHAT A FAMILY UPDATE MAY CONTAIN

- Assessment/plan title and publication date.
- Score or mastery level where recorded.
- Linked learning outcome and competency where configured.
- Teacher narrative where included in the approved published snapshot.

RECORDS AND REPORTING

Step 8: generate reports and track operations

Use school reporting and operations according to the permissions assigned to your role.

Reports

School administrators can select a learner/class report and download PDF or spreadsheet exports available in the product.

Bulk upload

Administrators can import learner rosters or assessment scores from the supplied CSV/XLSX templates. Review the preview and validation results before importing.

Fees

Administrators can configure fee structures, record or review payments and monitor outstanding/pending items where configured.

Insights

Dashboards and analysis summarize stored records. Treat automated or AI-assisted analysis as decision support; staff must review source data and context.

Reports need complete source data

Before interpreting results, check that learner records, class/subject assignments, assessment dates and marks/evidence are accurate and complete for the period.

PRIVACY REMINDER

Download only records needed for your role. Share exported files using school-approved secure channels and retention practices.

TROUBLESHOOTING

Common issues and first checks

Most workflow problems are caused by missing setup or a role/class assignment mismatch.

What you see	First checks
Teacher cannot see a class	Ask the administrator to check the teacher-to-class assignment and school account.
Teacher cannot choose a subject	Confirm the subject exists and is assigned to that teacher for the selected class, or that a class-wide assignment is intended.
Cannot create a score assessment	Confirm assigned class and subject, title, assessment type, date and maximum score.
Cannot enter evidence on a plan	Check the plan is OPEN, the teacher is assigned to the class, and learner records belong to that class.
Parent sees no learner / update	Check the parent-learner link and confirm evidence has been published.
Import shows validation errors	Compare column names and required values with the downloaded template; use unique admission numbers and review the sample rows.
A stale-workspace conflict appears	Reload the lesson to receive the latest revision, then review the form before saving again.

Do not work around access controls

A 403/404 response may mean the signed-in user is not assigned to the requested school, class, subject or learner. Ask an administrator to correct the assignment rather than sharing another user's account.

QUICK REFERENCE

A repeatable school rhythm

Use this lightweight operating cadence to keep records timely and family communication trustworthy.

1. **Before term**
   Admin verifies academic year/periods, classes, subjects, users, teacher assignments and curriculum configuration.
2. **Each school day**
   Teachers open assigned classes and record attendance against the correct date.
3. **Each assessment cycle**
   Teachers create score assessments or CBC plans; capture complete work; submit evidence for review.
4. **Review cadence**
   Designated administrators/reviewers clear submissions, return work with actionable reasons and publish approved evidence.
5. **Family communication**
   Parents review published learning updates for linked learners and contact the school if expected items are missing.
6. **End of period**
   Administrators check data completeness, generate reports and confirm the intended audience and sharing channel.

Keep improvement in view

Start with a small workflow, review how staff use it, fix data or setup gaps, then expand. The goal is a consistent and trustworthy process, not simply more records.

NEED HELP?

Contact your school administrator or designated StudentOS implementation/support contact. Keep your school name, role, page and a brief description of the issue ready; never send a password.
